

# Strengthen Service Levels at the lowest possible cost

## Access the right parts, in the right place, at the right time.

Rapidly changing technology, market volatility, and increasing customer expectations put a tremendous strain on the aftermarket supply chain and on you and your channel partners to deliver on-demand services. To stay ahead of these pressures, it's critical to optimize your parts inventory with a SaaS platform that can digitally transform your operations and provide AI- and ML-driven insights to simplify and automate complex processes, increase parts availability, reduce costs, and improve productivity.

Syncron Inventory delivers on these requirements and helps you optimize your parts inventory to achieve a more connected, reliable, profitable, and customer service-focused aftermarket business.

### Maximize aftermarket revenues

Optimize the complete service parts supply chain and improve parts availability up to 20%.

### Reduce parts supply chain expenses

Lower stock holding, freight, and other aftermarket supply chain costs by up to 40%.

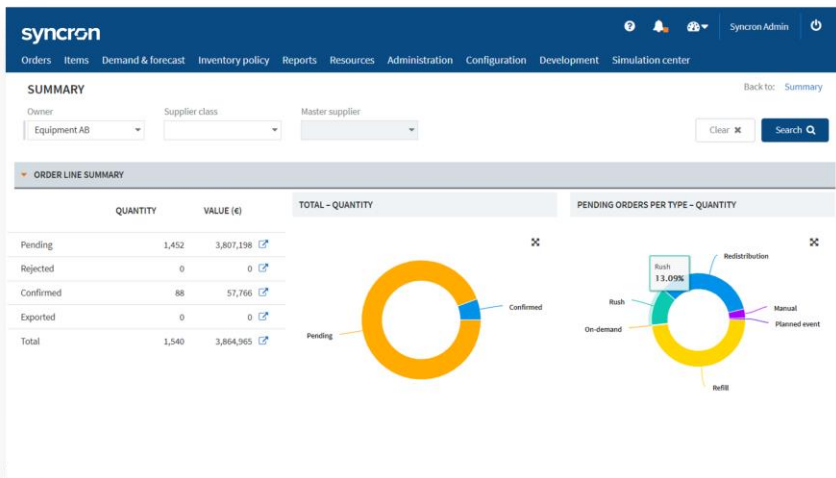

### Automate routine tasks

Eliminate manual processes and waste and expand worker efficiency and customer focus.

### Resolve inventory concerns in advance

Run simulations and produce data-driven insights to make swifter, more accurate decisions.

**20%** (Up to) improvement in parts availability

**30%** (Up to) reduction in total stock value

**40%** (Up to) reduction in freight and other aftermarket supply chain costs

Generate numerous performance optimized reports specifically engineered for the aftermarket to quickly gain **insights on your inventory operations and KPIs.**

# Core capabilities

## Synchronize your entire supply chain

Close the gap between which inventory items you think you may need and what you will actually need on hand to free up valuable working capital.

- Fine-tune forecasting accuracy by analyzing varying data sets and applying best-fit algorithms
- Calculate probabilities for different demand outcomes
- Make accurate, on-the-fly adjustments based on campaigns and market knowledge
- Aggregate demands across BOM structures and the supply chain

## Refill inventory efficiently and effectively

Execute on established calculated inventory replenishment policies for ordering parts stock and to increase their availability by up to 20%.

- Automate stock replenishment
- Mitigate the risk of run-outs
- Maximize order fill up
- Share order schedules and plans with suppliers

## Access the right parts, in the right place, at the right time

Capture and automate your most intelligent strategies for managing inventory and improve service levels and experiences.

- Optimize inventory across a multi-echelon distribution network
- Order parts in the most economic quantities
- Improve inventory management with cluster analytics
- Deliver parts efficiently

## Differentiate your service operations with advanced analytics

Use data to your advantage and unlock opportunities across the entire service supply chain and inventory ecosystem.

- Gain invaluable visibility into inventory operations
- Synthesize millions of data points to produce clear and actionable insights
- Travel back in time and use “what if” analyses to predict business outcomes
- Use GPS data to track equipment in the field and their location
